

CARB Control Measure for Ocean-Going Vessels At Berth Webinar Summary

Cory Shumaker, Development Specialist, California Hydrogen Business Council

On January 30, the California Air Resources Board held a webinar on a control measure for ocean-going vessels at berth. CARB staff discussed suggested changes to the proposed At Berth Regulation based on Board direction during the December 5, 2019 Board Hearing and public comments received. A second Board hearing regarding this issue will be held April 2020 in Sacramento.

Part of the control measure is innovative concepts for at berth technologies, with the planned due dates for container/reefer/cruise ships set for July 1, 2021 and December 1st, 2021 for all other vessel types. The proposed control measure for ocean-going vessels at berth will be submitted to the Office of Administrative Law for approval late Summer 2020; upon approval regulation will go into effect on Jan 1, 2021. The webinar presentation can be found [here](#). More information on shore power regulations can be found here: <https://ww3.arb.ca.gov/ports/shorepower/shorepower.htm>
